Cave Letterbox Installation

The Cave Letterbox comes completely assembled, so installation is a breeze after you have had the hole in your wall cut to size.

The actual hole in the wall needs to be 5 to 10mm wider and higher than the box size you select.

With the hole in the wall cut / formed to the correct size, just simply slide the complete box with fascia, in from the front of your wall until the fascia fits tight against your wall, then have another person open the rear of the box, reach in and screw out the internal screws. (1 on each side of the box) This locks the box into the cavity. If there is a hole around where the screws extend out, just insert a suitable piece of timber into the void for the screws to make contact with.

To finish off the installation apply some sealant around the side & top edges of the front fascia, and around the box at the rear.

When the sealant has dried, touch it up with paint the same colour as your wall, this allows the fascia and rear of the box to blend in with the wall, and provide a seamless finished look.

As the 2 keys supplied for the lock have a 200 possible key combination to provide extra security, we are not able to replace lost keys, so we recommend that you have extra keys cut.

Maintenance

Wash with soapy water whenever it appears dirty or dusty.

Do not use window cleaner or abrasive cleaning products.

For stubborn marks use a small amount of Kerosene.

If the lock becomes stiff or it is hard to insert the key, give it a quick spray of WD40 or a similar product while moving the key in and out and rotating the key
